

Scottish Water
Trusted to serve Scotland

Working together,
saving water, saving energy

I suppose that before I received the pack I didn't really think that water was a problem in Scotland. I hadn't really thought about the energy needed to process water either.

Before I received the brochure and leaflet, I was just trying to make sure that I limited my water use as much as possible and I collected a bit of water in the garden to water my plants.

The brochure and leaflet made me think more about the energy use associated with water in Scotland.

So now, I turn off the tap when brushing my teeth and only boil as much water as I need when I use the kettle to try and reduce the amount of energy I use

at home. Not that you need hot water to brush your teeth, but you just get into a habit of always turning the tap off when you're not using it.

The pack made me think more about the energy required to process and clean water before it arrives at my home, and this encouraged me to change my behaviour.

Peter, Edinburgh
